RE: Letter of Recommendation & Reference

To whom it may concern,

Spiecapag has worked with Jumbo Machine Moving for the last three years, on both the Transnet NMPP Pipeline as well as the Sasol GNP Pipeline. The company supplied both projects with plant and certified operators to fulfil numerous activities.

The equipment we received was of a very high standard and it was more than adequately supported by a reliable and well-resourced maintenance team. Safety is a very important consideration for us and our clients and I can confirm that Jumbo Machine Moving maintained an excellent safety record for the duration of these projects. In addition I found the management team and administrative support from Jumbo Machine to be very professional and readily available to efficiently solve issues as they arose.

The activities that Jumbo Machine Moving have been involved in include:

- the transport of the pipe to the sites
- off-loading of pipe on site
- provision of mobile cranes used in the camps
- stringing of the pipe along the construction right of way
- transportation of side-booms and other heavy equipment
- provision of crane trucks for the welding and coating teams
- provision of 8x4 rigging trucks for valve construction and hydrotesting teams.

Spiecapag has been very satisfied with the service it has received to date and would have no hesitation in recommending Jumbo Machine Moving to other potential clients with a similar scope of work.

Should you require any further information please feel free to contact me.

Yours Faithfully,

John Walsh, Project Director, BE, MSc, C. Eng, M.I.EI.
